

# European wide network of psychosocial care and research

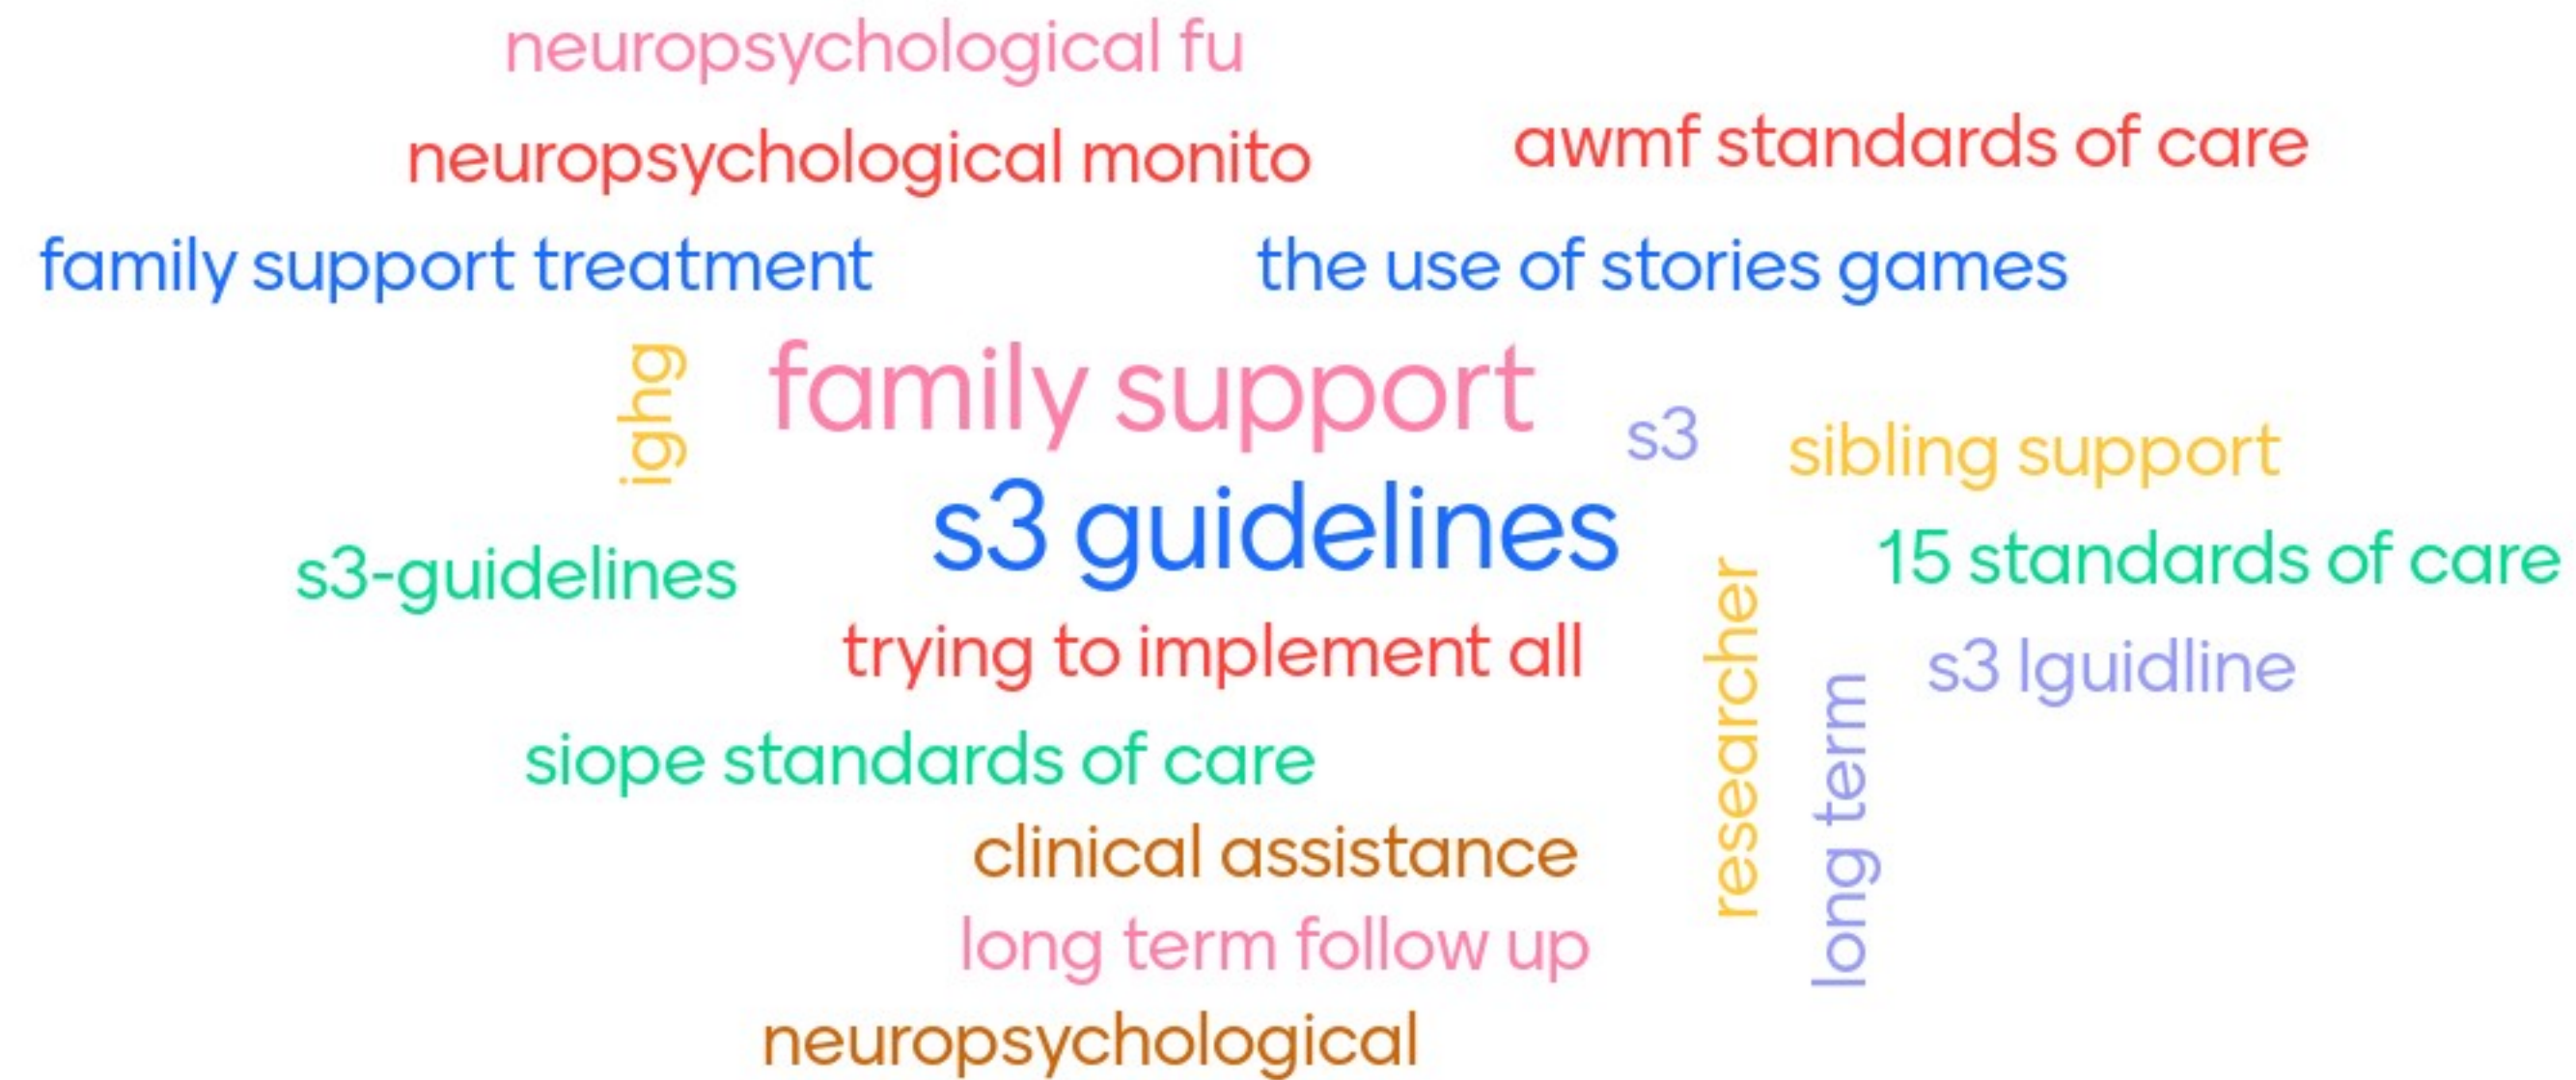

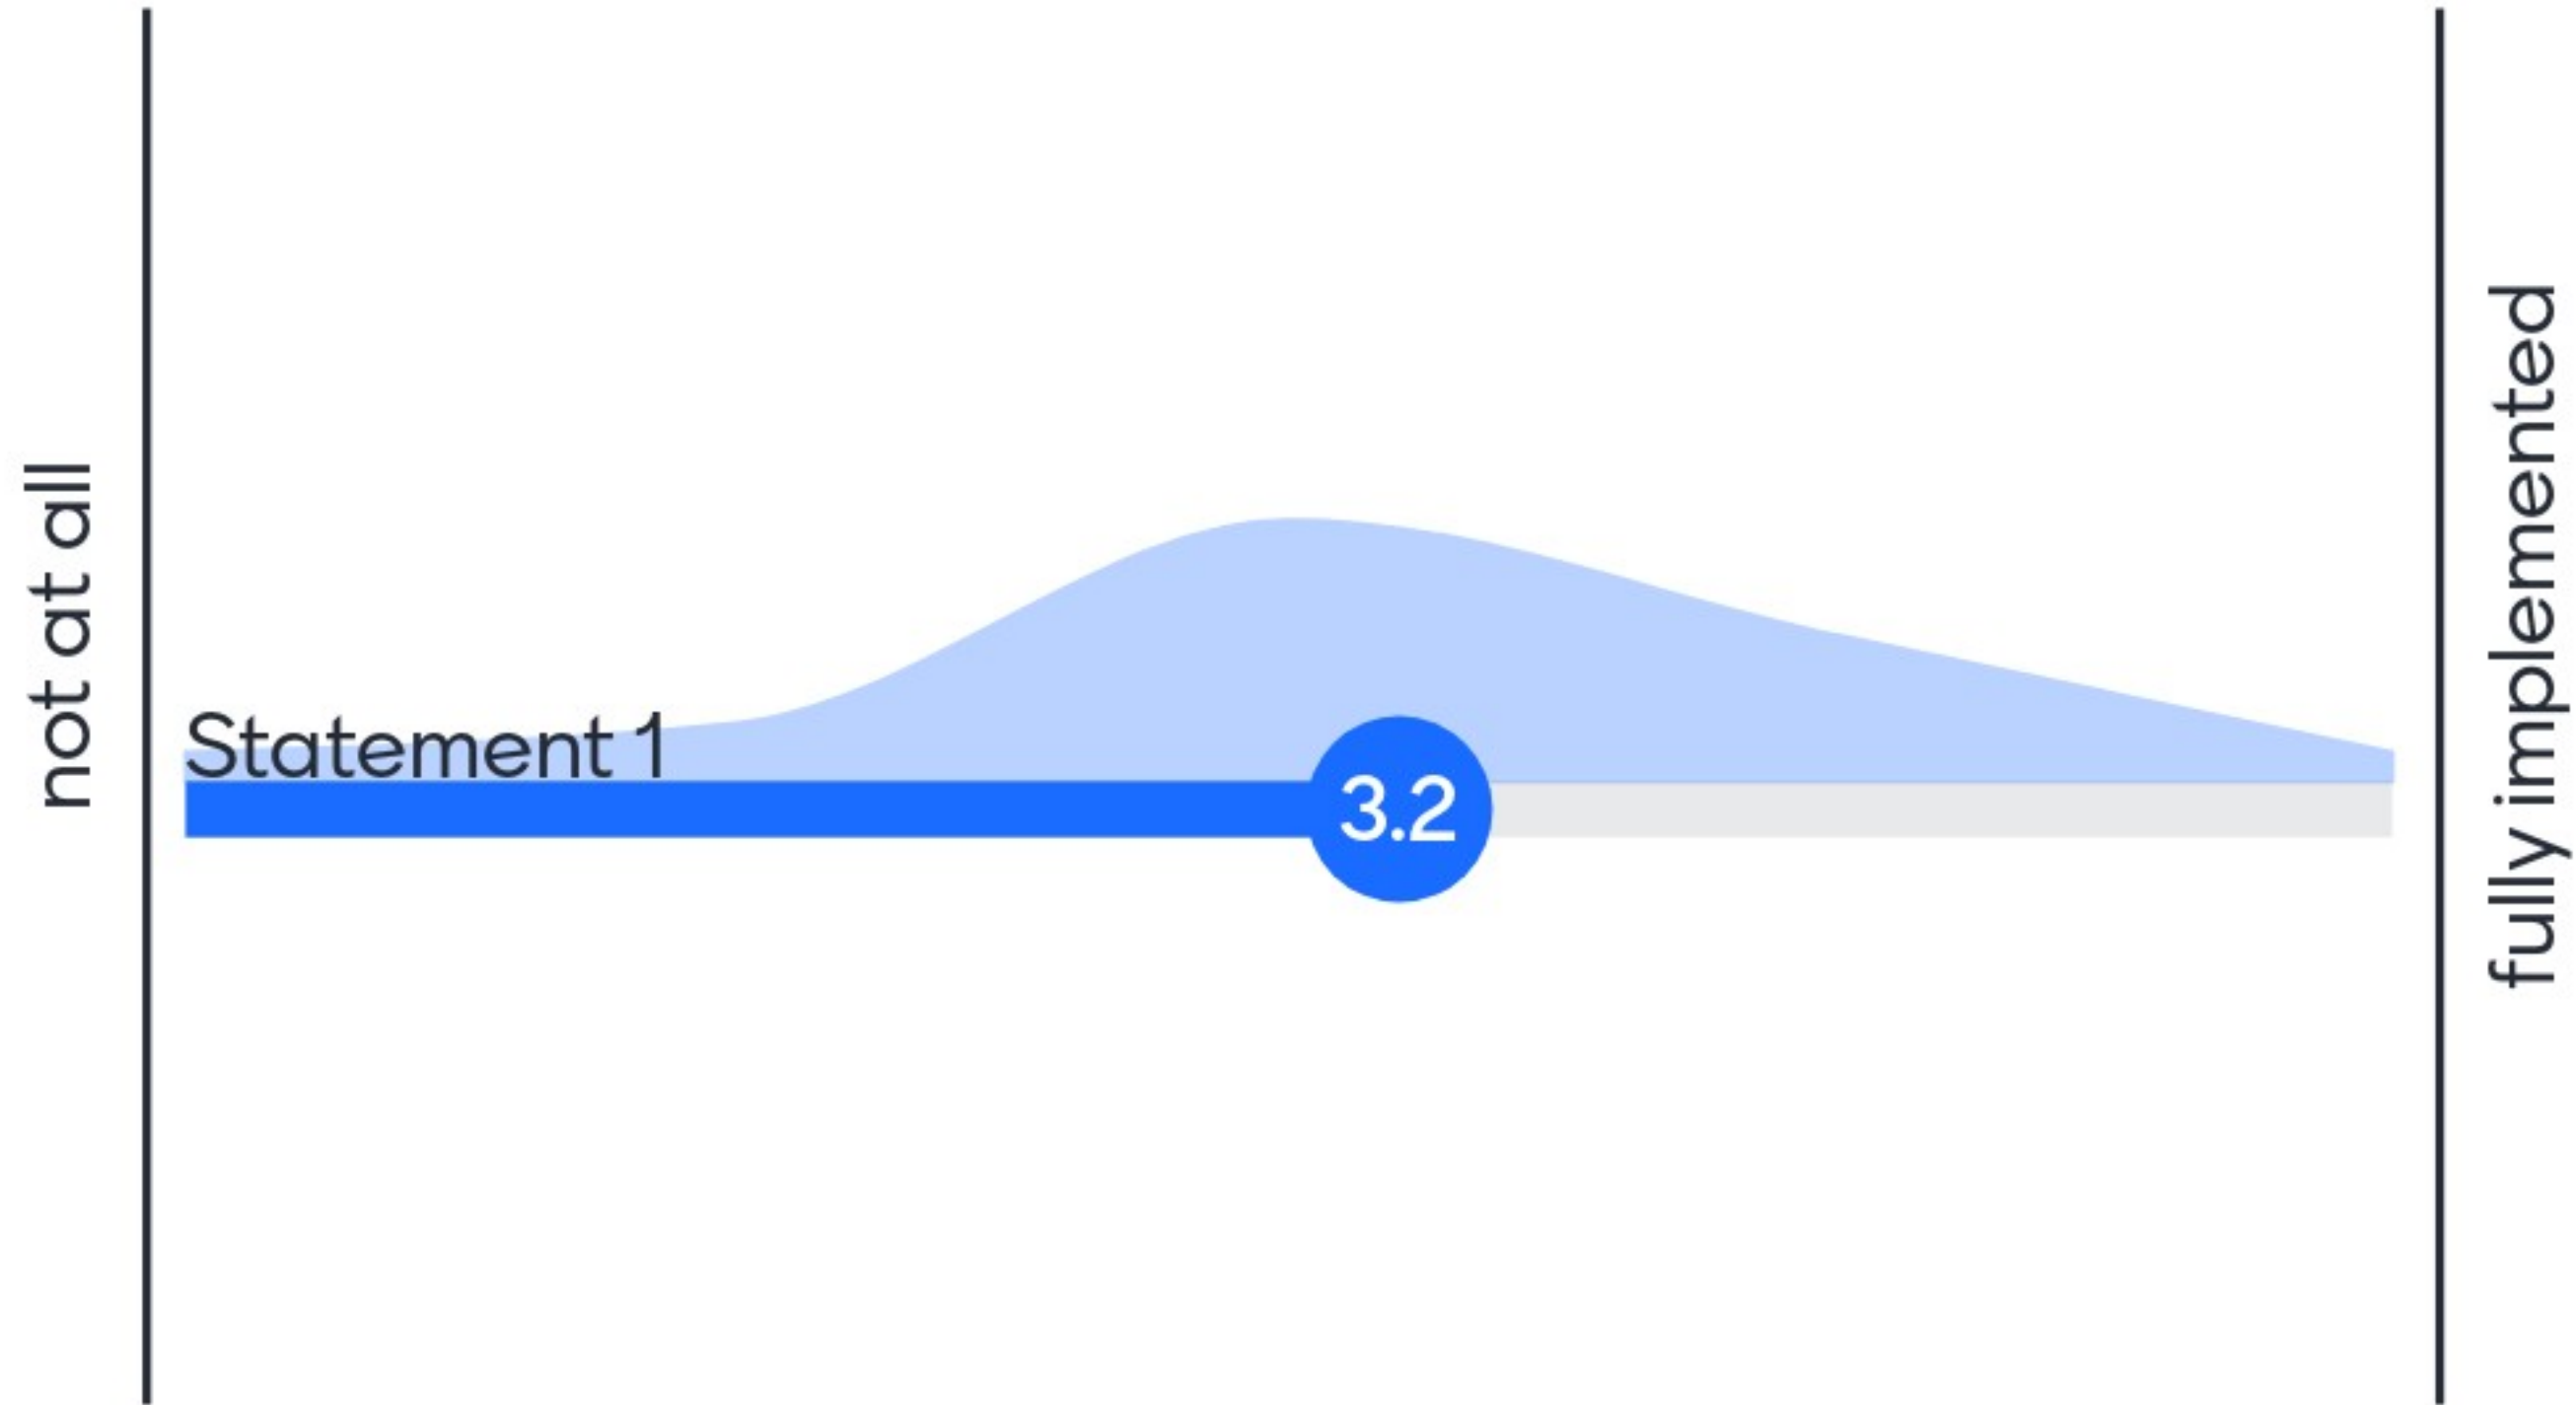

# This is how I could and would like to contribute to this group

# Psychosocial standards: We all know about standards – which one are you working with or do you know of?

# How are the psychosocial standards implemented in clinical care

# This is what I want people to know about psychosocial care and research

late effects and impact  
dont be afraid of reseach  
mostly support  
research is needed that we are needed  
that they are feasible knowing is doing better  
for the whole family interdisciplinary member  
the broad expertise  
best practices less treatment  
different professions  
psychological influences

Meet the needs! What are the 3 most important psychosocial services that should be provided in every cancer center when a child is diagnosed with

verbal and non verbal

research

time

multidisciplinary work

follow up training

room to meet families

# Hurdles and Barriers for implementing psychosocial care

# Solutions to overcome hurdles and barriers

stepped cared approaches, guidelines

Improve awareness im interdisc team, guidelines, Patient involvement

International collaboration. Learn from each other and do not re-invent the wheel

take a deep breath and carry on ;) and in all seriousness: interdisciplinary exchange - we are not alone with this problem and can share our solutions/support each other.

European standards and guidlince

Work together, form a force :), share best practice and projects, learn from each other, raise awareness locally

more funding for psychosocial workers. Consciousness of importance of psychosocial issues in the whole team. More teamwork: talking with each other. follow the guidelines.

Involvement of patients and parents; Combining clinical and research works

professional exchange

# Visions: What is your Vision for Psychosocial Care and research in 2050?

evrybdy receive same care  
knowing much more      sufficient funding  
sufficient staff      patient involvement  
awareness of special need  
transitions standards      recognition for psy  
awareness of late effects  
interdisciplinary network  
family and team together  
child in the center  
eyelevel to medical staff
