

Speaker Profile

18 May 2022

Adrenocortical carcinoma with brain metastases in a child with Beckwith-Wiedemann syndrome

Presenter: Anna Campello (IT)

I am a Pediatric Resident at the Department of Pediatric Oncohematology, in Regina Margherita Children Hospital, in Turin, Italy. My main fields of activities are sarcomas and rare tumors and in the past years I have strongly invested my professional energies to improve my knowledge in this area. I have also developed strong interest in phase I/II experimental clinical trials and I'm involved in research studies that explore the genomic profiles of sarcomas in pediatric, adolescents and young adult patients.

Expert: Marjolijn Jongmans (NL)

Marjolijn Jongmans was a consultant in clinical genetics in the RadboudUMC (2012-2018), since 2015 combined with an affiliation at the UMC Utrecht/ Princess Máxima Center for Pediatric Oncology. Starting from June 2018 she has a full appointment at the UMC Utrecht/ Princess Máxima Center. Her topic of expertise is diagnostics and counseling of children with cancer predisposition syndromes. Her job as a clinical geneticist in the Princess Máxima Center is to coordinate clinical genetic services for children with cancer, including the development of genomics related consent procedures and syndrome specific surveillance guidelines. She is a co-principal investigator in the Kuiper group with a focus on the identification of novel childhood cancer predisposing genes and description of the corresponding phenotypes. In November 2013 she defended her PhD thesis entitled 'Improving the clinical and molecular recognition of pediatric cancer predisposition' *Cum Laude*. Since 2013 she has been investigator on several grants: to find novel cancer predisposing genes in children with cancer and features suggestive of cancer predisposition, in children and young adults with colorectal cancer and in children with renal cancer respectively.
