Contributing to Childhood Cancer Survivorship in Europe: current programmes, emerging trends and furthering the agenda

Nicole SCOBIE

Research priorities in childhood cancer survivorship: The Patient Advocate Perspective

Research priorities in childhood cancer survivorship

Patient/parent perspective

1. Today's survivors

- Developing effective therapies for survivors
- Psychosocial research

2. Today's therapies

- Issues from current treatments (for example, fertility preservation)

3. New/innovative therapies

- Monitor new innovative therapies and learn from results in order to inform future treatment decisions (ACCELERATE LTFU Registry)

4. Access to information

Research priorities in childhood cancer survivorship

Patient/parent perspective

Research should be implemented directly into all clinical trials and therapies, so that current patients are monitored and followed, their survivorship path is part of the treatment plan, and they have access to information. But also, so that the knowledge gathered from their experience becomes part of what informs treatments for cancer as well as for survivorship in the future.

THANK YOU FOR YOUR ATTENTION
