WEBINARS

Most challenging cases
in paediatric oncology

Speaker Profile

15 March 2023

Simultaneous onset of cancer in mother and child: Extremely rare Choriocarcinoma Infantile

Speaker : Martha Hetman
(PL)

M.D., Department of Paediatric Bone Marrow Transplantation, Oncology and Haematology, Wrocław, Poland. Speciality training: Paediatric Haematology & Oncology. PhD student at Wrocław Medical University - metabolomic studies in children with trisomy 21. Main interests: solid tumours, the late effects of oncological treatment during childhood, and blood coagulation disorders in children. Study coordinator and sub-investigator in clinical trials (haemophilia; sarcomas).

Expert: Daniel Orbach (FR)

Daniel Orbach is a paediatrician specializing in oncology. He heads up the Department of Paediatric, Adolescent, and Young-Adult Oncology at Institut Curie. He is a member of the French and European groups of doctors working on childhood and adolescent soft tissue sarcoma (SFCE [French Society of Childhood and Adolescent Cancers and Leukaemia] committee and the EpSSG). He coordinates the French very rare childhood cancer group ("Fracture") and is a founding member of the European group of paediatricians that care for young patients with very rare cancers (Expert Group). He is also a member of the SFCE's childhood malignant germ cell tumour (MGCT) committee. Dr. Orbach is involved in several clinical and translational research projects seeking to improve the understanding and treatment of these forms of cancer.
