Excessive treatment toxicity in an adolescent with T-lymphoblastic lymphoma

Speaker: Fiona Poyer (Austria)

I started my career in pediatric oncology with various research projects during my medical studies, mostly in the fields of tumor immunotherapy and infectious complications of cancer treatment. After graduating in 2015, I started my residency in general pediatrics at St. Anna Children's Hospital in Vienna. During my fellowship, I became increasingly involved in the national coordination of international randomized controlled trials, such as AIEOP-BFM ALL 2017, as well as Phase I/II trials. After several hematology and oncology rotations during my residency, I continued into my fellowship in pediatric oncology, which I will finish in April 2024. I see myself primarily as a clinician, but I am highly interested in clinical and translational research and continue to be involved in clinical trials on a national and international level. I also promote international collaboration by being a member of the Young SIOPE Steering Committee as well as the SIOPE Educational Steering Committee. Furthermore, I strongly believe in supporting the next generation of pediatric oncologists from an early stage, teaching classes at the Medical University of Vienna and mentoring medical students at my institution.
